            The Essex Packet group, and KEPAC are combining their

efforts for one day in the near future, to bring you....
....The Combined Boot and Junk Sale...!

 The event will take place on Sunday, September 19th, at the
Rocheway Centre, Southend, and is hosted by the Southend and
District Radio Society to whom thanks are also due.

 The " Combined " theme continues, because we have actually
arranged a boot sale, followed by a junk sale auction, for all
things " Radio Amateurish..." Please dig out that junk, and
bring it to the auction...!

 Starting the day at 10 am is the car boot sale, this will take
place in the car park unless it is raining, when (without the
" boot " ...!) it will take place in the main hall. This part of
the day   will finish at noon, to be followed by a junk
sale auction held in the main hall, commencing at 12-30 and
finishing at 3 pm.

 The car boot sale entrance fee is five pounds, which also enti-
tles entrance for two, to the junk sale. Entry to the junk sale
is otherwise 50p.

 Items entered in the junk sale will be subject to the usual
commission of 10%, with a minimum charge of 50p. The minimum fee
will also be levied on items that do not reach their reserve
price.

 If a seller wishes to display their goods before the auction
starts, the security of the items will be their own responsibil-
ity.

 The auctioneer may split lots during the sale, so if a seller
desires otherwise, this point must be made clear to the auctio-
neer beforehand.

 Now you know how the junk sale auction is to be run, see what
else we have for you...!

 There will be a small selection of packet related shareware
available, and an opportunity to join either (or both...!) of
the two packet groups. Perhaps you have a packet related problem
that is bugging you ? Help will be on hand to point you in the
right direction.

 Also planned is the opportunity to have the deviation on your
radio checked. For this, it is best if you bring along your TNC
as well as your radio, the two items can then checked for optimum

adjustments. (Don't forget power leads, connecting leads etc,
although you do not need the computer...!).

A talk in station will be provided by the Southend and District
Radio Society, on 145.550 Mhz, (S22).

 Food and drink, (and " non-drivers " drink...!) will be
available during the day.

 You'll also get the chance to clear the loft, (and fill it
again in the evening...But don't tell the XYL that part...!)

 Last, but not least, you will have a chance to meet friends old
and new, and meet the committees of the two groups.

 As the day is a combined effort, both groups will share the
running costs, and the profits (profits ? Did I use a naughty
word ?...!), so your attendance will contribute to the future
work done by both groups for the packet communities across the
counties of Kent and Essex.

 The event manger for the day is George, G1NNB (I lost the toss,
which is also why the first line reads the EPG and KEPAC, rather
than the other way round !)

 This looks like being a good day, and we look forward to seeing
you there.

 Regards and 73,

 Stan, G4EGH @ GB7EZB, Chairman, KEPAC. (I got in first...!)

 George, G1NNB @ GB7ESX, Chairman, EPG.

Subject: Link State Numbers
To: packet-radio@ucsd.edu

I'm working on a host mode application for the AEA PK90. I need
to determine if a connection is set up on a logical channel (similar to
the hardware DCD connection when logical channels are not used). The
manual says (on page 6-8) that link state is returned in response to a
CO command. It is returned as the "link state-1, e.g., S05 is sent as
$34". I cannot find in the manual where the numeric link states are
listed. These MAY be in common to all equipment using AX25. Can anyone
send me a list of link states by number?

THANKS!!!

Harold
